Cohort: app flow and screens

Matches prototype v4 · 23 October 2026

How Cohort is navigated and how people move through it: the navigation map, every screen with its elements and actions, and the eight core user journeys, from a new student's first launch to a firm posting an articleship. Screen names and behavior match the clickable prototype exactly.

1. Navigation map

Five tabs sit on the bottom tab bar, with Community in the middle. Messages lives on the top-right of the app header from every screen. The floating + button opens the create menu above the tab bar. The tab bar and + stay pinned while scrolling.

Feed

Greeting, Top 10 reads for today, filter chips, posts and announcements.

Resources

Search, course segments, levels, type filters, subject accordions.

Community

My groups and Discover. Group creation only from the + menu.

Work

Vacancy scan banner, category filters, job cards with Apply.

ICAI

14 service tiles, Cohort AI chat, MCQ practice, connections.

Messages

Conversation list with unread badges, then individual threads.

Create sheet

Five actions: post, group, job opening, message, resource.

2. Screen inventory

Feed (home) /

The daily home: what is worth reading today, then the community's posts and announcements.

ON SCREEN

- Greeting with first name and date
- Top 10 reads card: PDF badge, one read at a time, dots, previous and next, tap to open the full document
- Filter chips: All, Posts, Announcements, Messages
- Post cards: avatar, name, role pill, time, text, likes, comments
- Pinned announcement treatment for official posts

KEY ACTIONS

- Flip through daily reads
- Open the full daily document and close it
- Filter the feed
- Like and comment on posts
- Scroll (the + button hides while scrolling)

Empty state: A quiet feed shows the daily reads and a prompt to follow groups or people.

Resources

/resources

The study library, organized exactly like the three courses are structured.

ON SCREEN

- Search bar for topics and subjects
- Course segments: CA, CMA, CS
- Level cards per course (Foundation, Inter, Final; Executive and Professional for CS)
- Type chips: All, Notes, Question papers, Videos, RTP and MTP
- Breadcrumb: course, level, subject-wise
- Group labels with subject accordions; each subject expands to resources with download buttons

KEY ACTIONS

- Switch course and level
- Filter by resource type
- Expand a subject
- Download a resource
- Share a resource from the + menu

Empty state: A subject with no resources yet offers the share-a-resource action.

Community

/community

Groups for study circles, exam-form help and professional topics.

ON SCREEN

- Two chips only: My groups and Discover
- Group cards: name, description, purpose pill, member count
- Join or Joined button per group

KEY ACTIONS

- Switch between My groups and Discover
- Join or leave a group
- Create a group from the + menu

Empty state: No groups yet: Tap + to create one, or join from Discover.

Work and hiring

/work

Articleships, jobs, gig work and industrial training, with a weekly vacancy scan.

ON SCREEN

- Vacancy scan banner: count of new matching openings this week
- Category chips: All, Articleship, Jobs, Gig work, Industrial training
- Job cards: firm avatar, role, firm and location, pay, tags, category, Apply button

KEY ACTIONS

- Filter by category
- Apply in one tap (button turns to Applied)
- Post a job opening from the + menu (verified firms)

ICAI module

/icai

Institute services, the AI study assistant, MCQ practice and the connections network in one tab.

ON SCREEN

- ICAI services: a 14-tile grid (exam form, admit card, results, announcements, study material, SSP portal, syllabus, mock test papers, RTP and MTP, important dates, articleship, membership, exam centres, helpdesk)
- Cohort AI chat card: bot avatar, name and online status, chat bubbles, quick-ask chips, free-text composer
- MCQ practice card: course and subject pill, question, options, instant right or wrong feedback, score screen with restart
- Connections: people cards with role, kind and Connect button

KEY ACTIONS

- Open an ICAI service
- Ask the AI via chips or free text
- Answer MCQs and see the score
- Send a connection request

Messages

/messages

One-to-one chats with students, mentors and firms.

ON SCREEN

- Conversation list: avatar, name, role line, last message preview, unread badge
- Thread view: back button, person header, message bubbles, composer with send button

KEY ACTIONS

- Open a thread
- Send a message
- Start a new message from the + menu

Empty state: No conversations yet: start one from the + menu or from a person card.

Create sheet

modal over any screen

One place for everything a user can create.

ON SCREEN

- Bottom sheet with a grip and a scrim
- Five actions with icons and descriptions: Create a post, Create a group, Post a job opening, New message, Share a resource
- Per-action mini form with one or two fields and a call to action
- Success state with a confirmation line and Done

KEY ACTIONS

- Open from the + button
- Pick an action
- Fill the form and submit
- Close via scrim, the rotated + or Done

3. User journeys

1 Onboarding: new student

Sign up to first value in under two minutes

1. Opens the app and sees the welcome screen: what Cohort is, in one line.
2. Signs up with phone number and OTP.
3. Picks course (CA, CMA or CS), then level, then attempt and city.
4. Lands on the Feed: greeting with their name and today's Top 10 reads already curated for their course.
5. A soft prompt suggests joining two or three relevant groups and setting vacancy-scan preferences.

Decision point: skipping the profile still shows the app, but vacancy matching and course defaults stay generic until it is filled.

2 The morning read

The daily habit the app is built around

1. Opens the app (optionally from the daily morning notification).
2. Sees the greeting and the Top 10 reads card on top of the Feed.
3. Flips through the reads with the arrows or dots.
4. Taps one that matters (for example, exam forms closing) to open the full document with all 10.
5. Reads, closes, and continues scrolling the feed.

3 Posting to the community

Share an update in under a minute

1. Taps the + button from any screen.
2. Chooses Create a post.
3. Writes the update and taps Post.
4. Sees the success state; the post appears at the top of the Feed with their name and role pill.

4 Joining a group

Find and join a study circle

1. Opens the Community tab.
2. Browses Discover, or searches by name (search arrives in v1.1).
3. Reads the group card: purpose, member count, description.
4. Taps Join; the button switches to Joined and the group moves to My groups.
5. Group activity starts appearing in their Feed.

5 Applying for an articleship

From vacancy scan to application

1. Gets a vacancy-scan notification, or opens the Work tab directly.
2. Reads the banner: how many new openings match their profile.
3. Filters to Articleship and reviews cards: role, firm, city, stipend, tags.
4. Taps Apply on a fitting opening; the profile goes with the application.
5. Button turns to Applied. Status updates from the firm arrive in Messages.

Edge case: an incomplete profile triggers a one-screen prompt to finish it before the first application.

6 Studying with the AI

Clear a concept, then test it

1. Opens the ICAI tab and scrolls to Cohort AI.
2. Taps a quick-ask chip (for example, Summarize Ind AS 115) or types a free question.
3. Reads the bot's answer; follow-ups keep the thread context.
4. Scrolls to MCQ practice and attempts a set on the same subject.
5. Sees the score, reviews the misses, restarts or moves on. The attempt saves to history.

7 Messaging a mentor

Direct help from a verified professional

1. Taps the message icon (top-right, with unread badge) from any screen.
2. Opens the mentor's thread, or starts a new one from the + menu.
3. Sends the question; the mentor replies in the same thread.
4. Unread badge clears on reading; new replies push a notification.

8 Firm posts an opening

A verified firm reaches students

1. The firm account (verified) taps + and chooses Post a job opening.
2. Fills role, firm, category, location, pay and tags.
3. Submits; the opening goes live in Work and hiring.
4. Matching students see it in their vacancy scan within the next run.
5. Applications arrive in the firm's inbox; the firm replies from Messages.

4. Shared behavior and states

The + button

Floats above the tab bar on every screen at 42px. Hides while scrolling content, on Resources, while the AI chat card is visible, and while typing in the AI composer. Reappears when scrolling stops or reverses. Rotates to a close icon while the sheet is open.

Tab bar

Pinned to the screen while scrolling, like a native app. Active tab shows the terracotta tint.

Loading

Skeleton cards in the Feed and Resources; a spinner only for actions that must wait.

Errors

Inline, in plain language, with a retry. A failed message send keeps the draft in the composer.

Success

Every create action ends in an explicit success state inside the sheet, never a silent close.

Offline

Downloaded resources and saved daily reads stay readable; everything else shows a cached snapshot with a banner.

Demo versus live

In the prototype, create actions end in demo success messages and data is sample content. In the live app, each flow writes real data: posts publish, groups appear in My groups, applications reach firms.

Mapped 23 Oct 2026 against prototype v4. Any screen change in the prototype should land here too.
