Cohort

The community app for CA, CMA and CS students - app UI walkthro

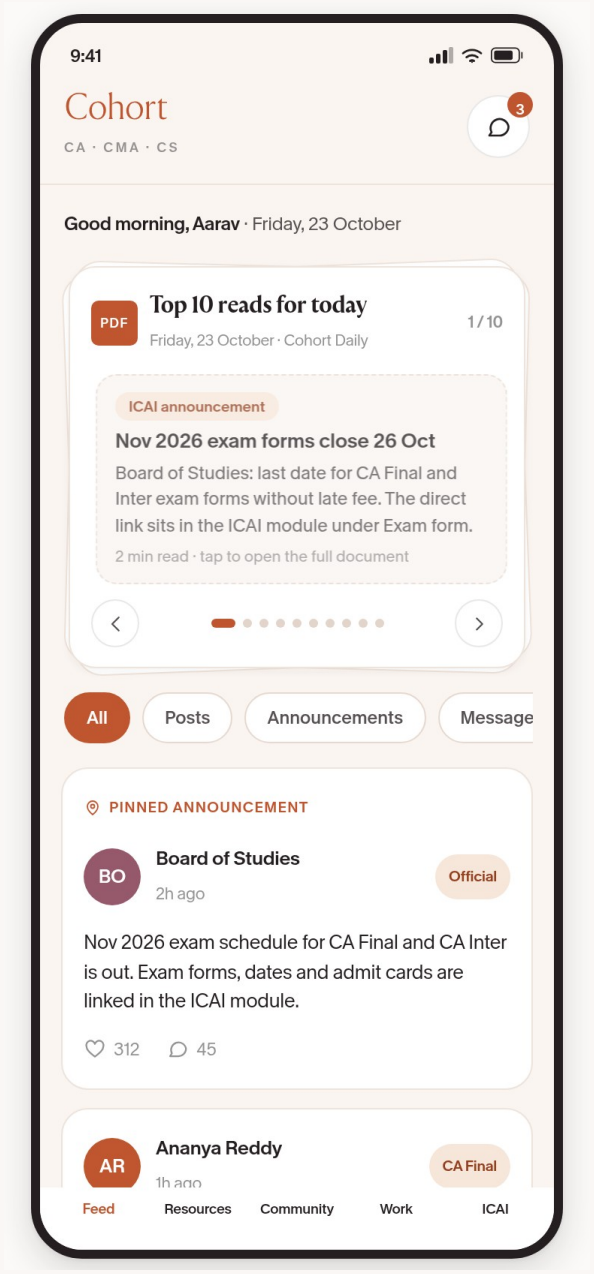

Every screen from the clickable prototype, one per slide, with what each does.
Android, iOS and web from one TypeScript codebase (React Native + React Native Web).

23 October 2026 - prototype v4 - sample content, not real data

Feed: the daily home

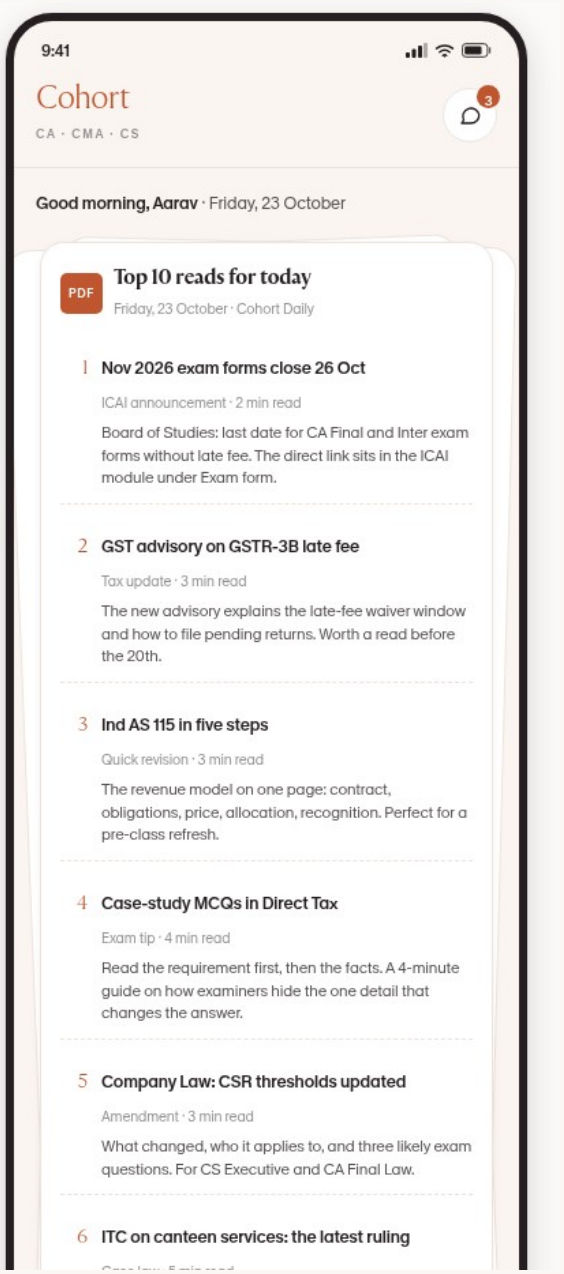

Opens with a personal greeting and the Top 10 reads for today, a document-style card that flips through ten daily reads.
Below it: one feed of community posts, pinned official announcements and mentor broadcasts, with filters for each type.

Top 10 reads, opened

Tapping a read opens the full daily document: all ten numbered reads with type and reading time.

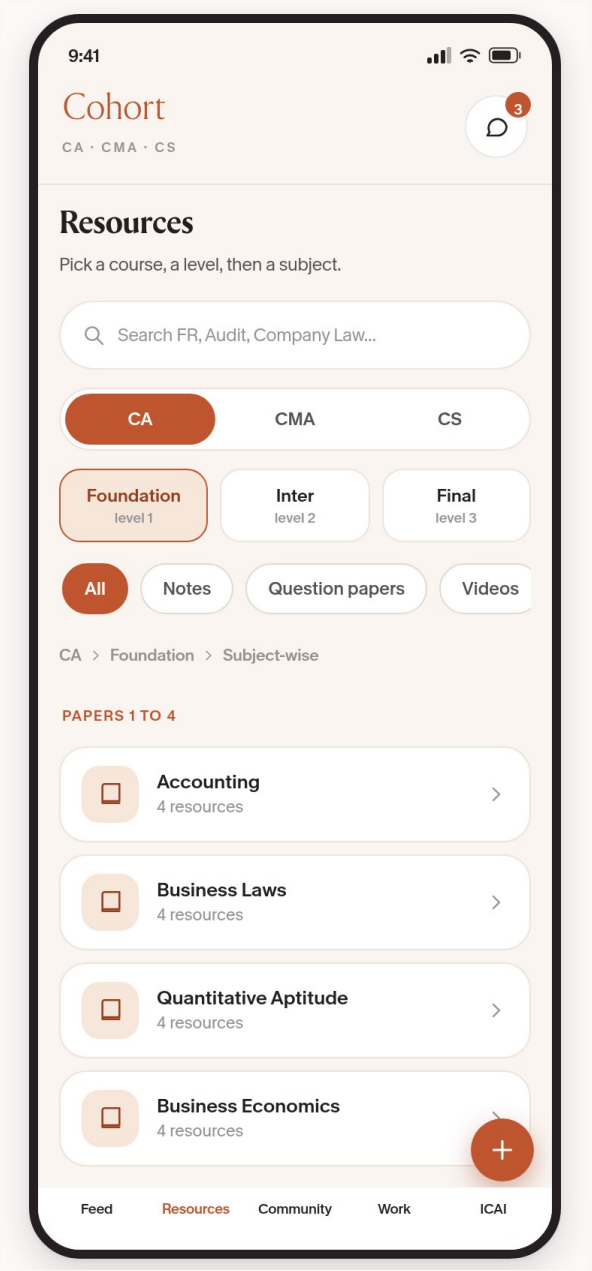

ICAI announcements, tax updates, quick revisions, exam tips, amendments, case law, mentor notes and career reads - fresh every morning.

Resources: the study library

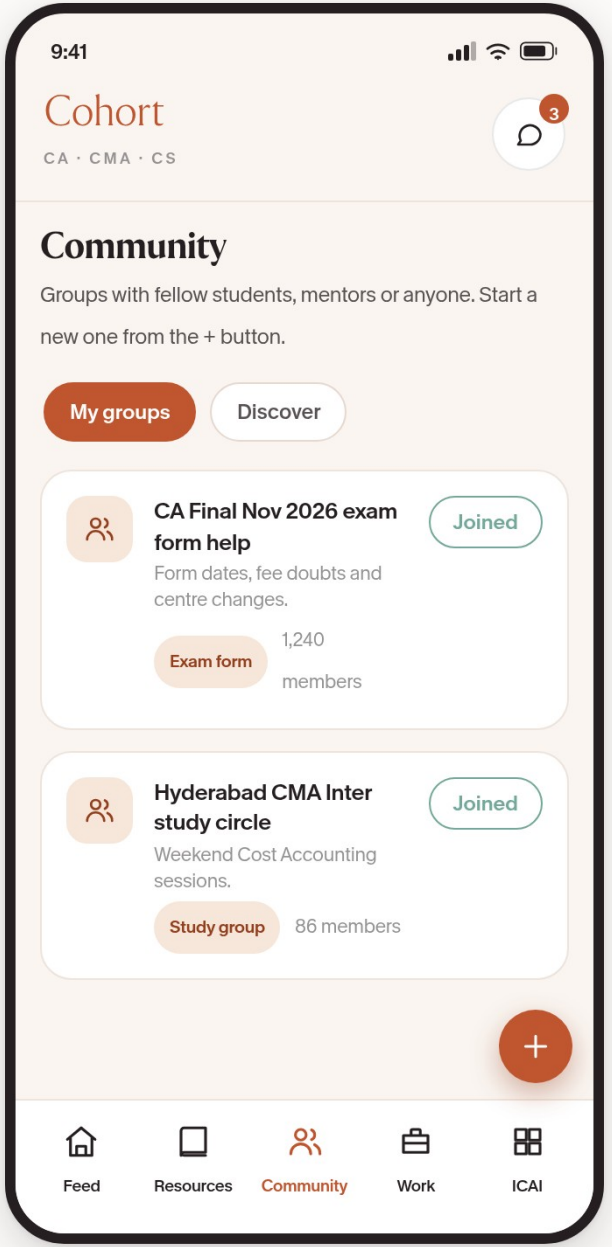

Organized exactly like the courses: pick CA, CMA or CS, then the level, then a group and subject.

Each subject expands into notes, question papers, videos and RTP / MTP, with downloads and a way to share your own.

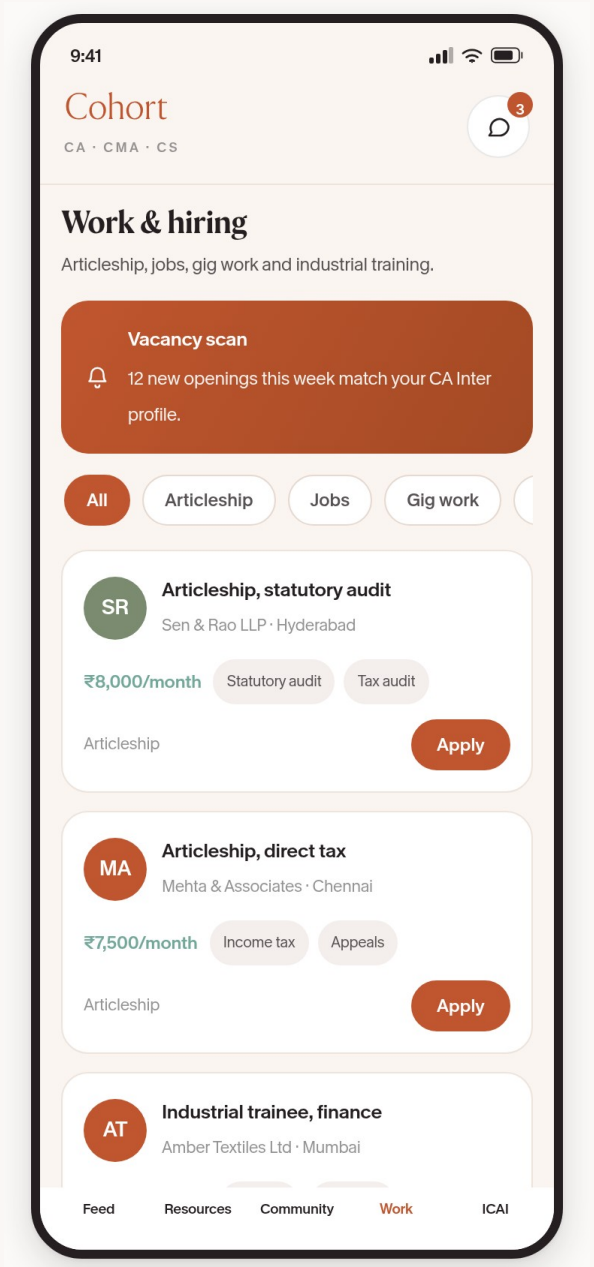

Community: groups

Two clean views: My groups and Discover. No create button here by design. Study circles, exam-form help and professional groups, joined in one tap. New groups are created from the floating + menu.

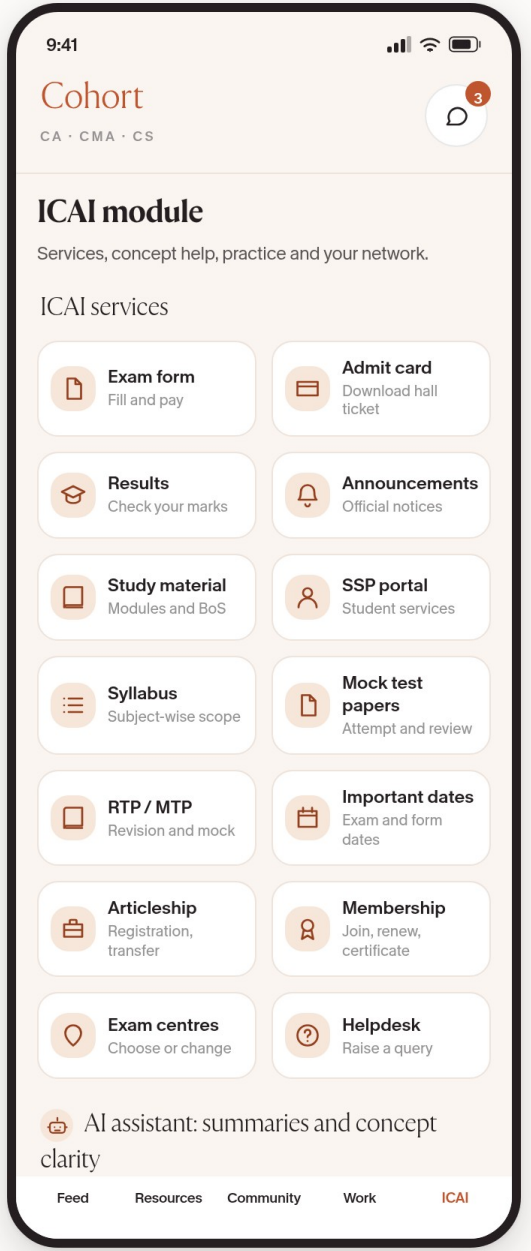

Work and hiring

A weekly vacancy scan banner: new openings matched to the student's course and level.
Articleships, jobs, gig work and industrial training with pay, tags and one-tap Apply. Firms post openings from the + menu.

ICAI module

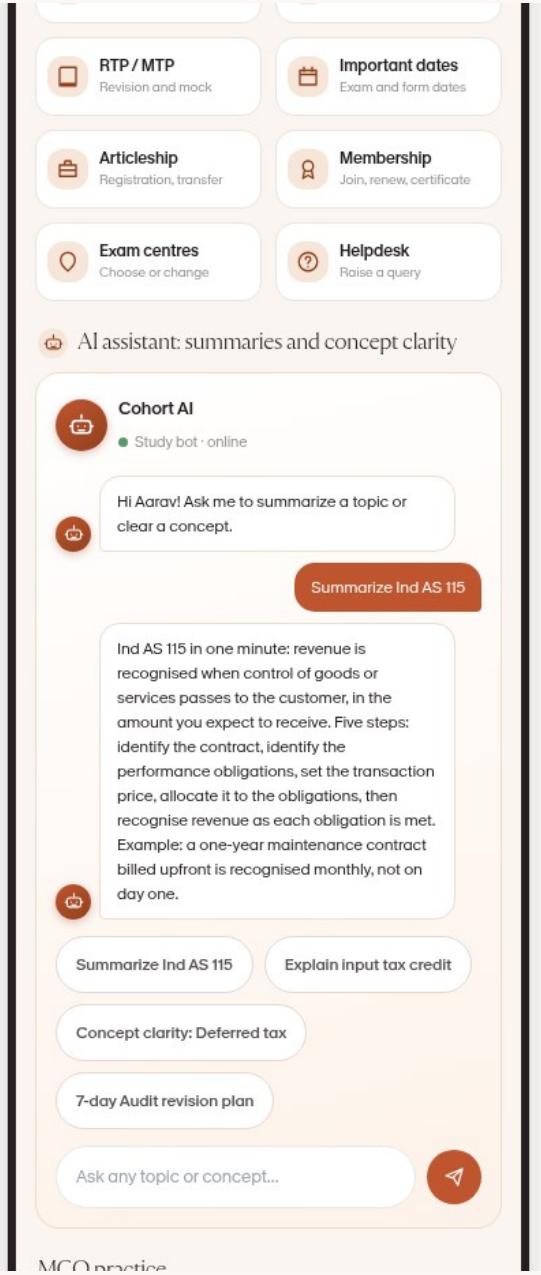

Fourteen ICAI services in one grid: exam forms, admit cards, results, study material, SSP portal and more, without hunting across websites.
Then the AI assistant, MCQ practice with scores, and the connections network of students, mentors and firms.

Cohort AI: the study bot

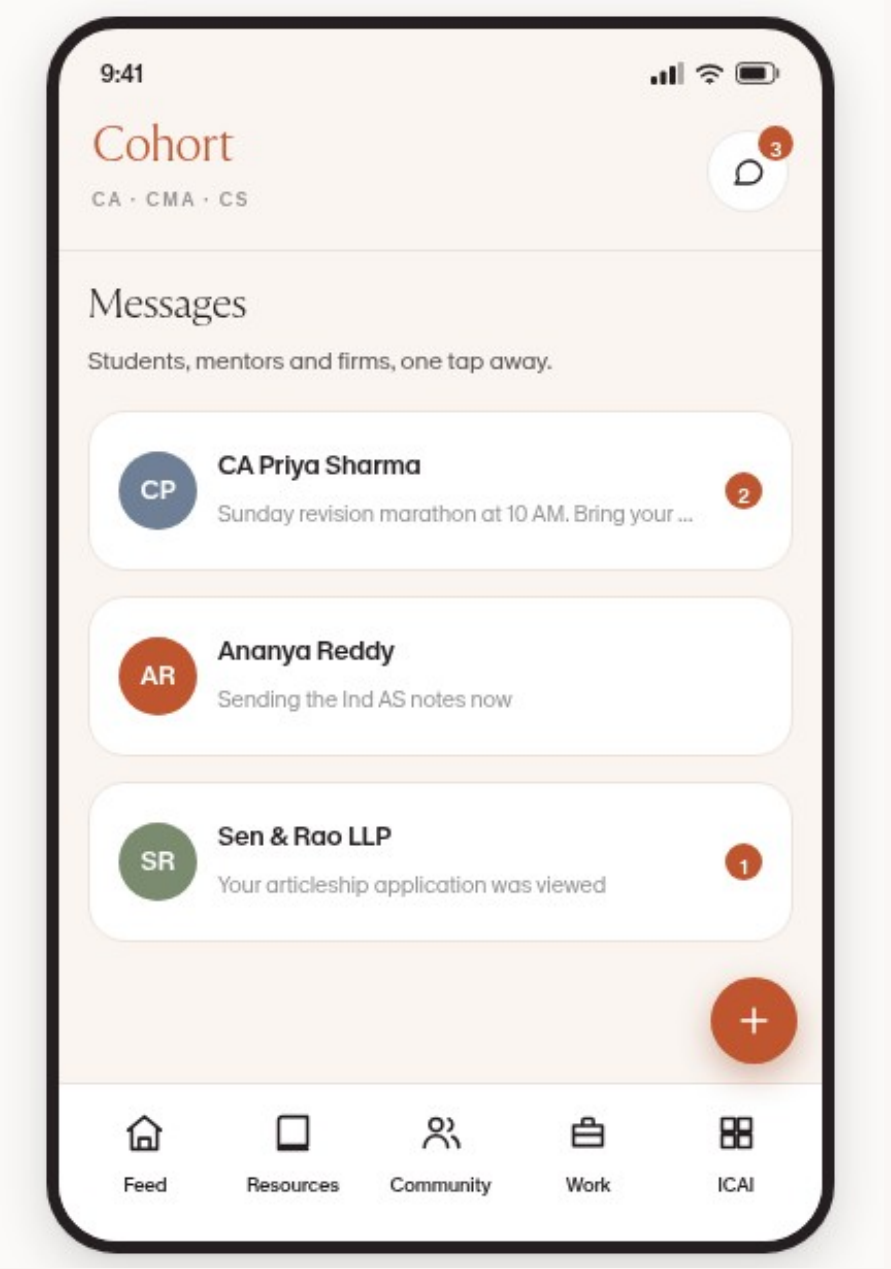

The assistant shows up as a bot: avatar, name and online status, with quick-ask chips and free-text questions.

Summaries, concept clarity and revision plans, study-scoped and exam-oriented.

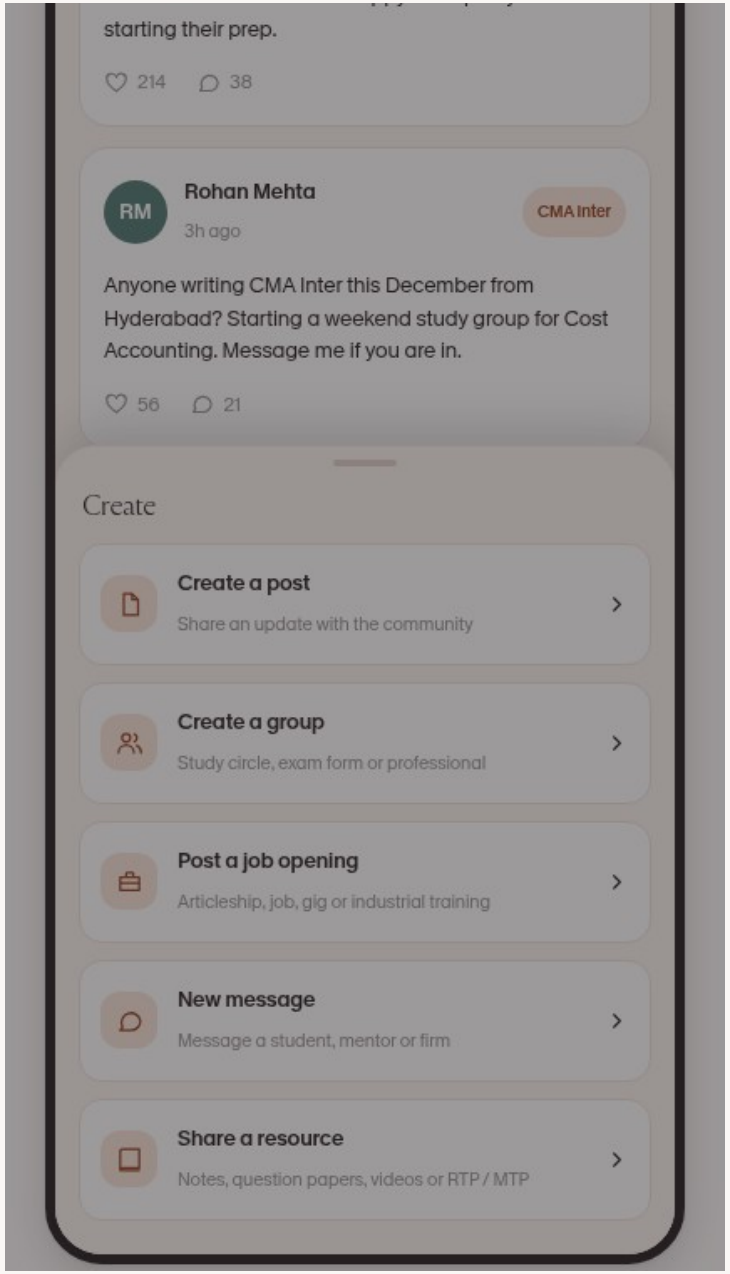

Messages

One-to-one chats with fellow students, mentors and firms, from the top-right icon on every screen.
Unread badges, previews, and a clean thread view. New conversations start from the + menu.

One + button for everything

The floating + opens a bottom sheet with all five create actions: a post, a group, a job opening, a new message, a shared resource.
It hides while you scroll or chat with the AI, and rotates into a close icon while open.

It is all clickable

Every screen in this deck runs in the working prototype: flip the daily reads, open the create menu, answer an MCQ, chat with Cohort AI.
